

LogAnomaly (BGL)使用说明

需要的环境：python3, keras

模板训练：LogAnomaly/ft-tree/

```
python -u ft_tree.py -data_path ../data/bgl.log -template_path  
../middle/bgl_log.template -fre_word_path ../middle/bgl_log.fre
```

模板匹配：LogAnomaly/ft-tree/

```
python -u matchTemplate.py -template_path ../middle/bgl_log.template -  
fre_word_path ../middle/bgl_log.fre -log_path ../data/bgl.log -out_seq_path  
../data/bgl_log.seq -match_model 1
```

获取bgl的正常日志序列：LogAnomaly/data/

```
python removeAnomaly.py -input_seq bgl_log.seq -input_label bgl.label
```

基于模板搜索近义词和反义词：LogAnomaly/template2Vector/src/preprocess/

```
python wordnet_process_mwb.py -data_dir ../../middle/ -  
template_file bgl_log.template -syn_file bgl_log.syn -ant_file bgl_log.ant
```

转换日志模板为词向量训练格式：LogAnomaly//middle/ 输入文件一定要是单行!!!

```
python changeTemplateFormat.py -input bgl_log.template
```

日志模板学习词向量：LogAnomaly/template2Vector/src/ (先make一下!!!)

```
./lrcwe -train ../../middle/bgl_log.template_for_training -synonym  
../../middle/bgl_log.syn -antonym ../../middle/bgl_log.ant -output  
../../model/bgl_log.model -save-vocab ../../middle/bgl_log.vector_vocab -beta-rel 0.8 -  
alpha-rel 0.01 -beta-syn 0.4 -alpha-syn 0.2 -alpha-ant 0.3 -size 32 -min-count 1
```

模板转向量：LogAnomaly/template2Vector/src/

```
python template2Vec.py -template_file ../../middle/bgl_log.template -  
word_model ../../model/bgl_log.model -  
template_vector_file ../../model/bgl_log.template_vector -dimension 32
```

模型训练：LogAnomaly/LogAnomal_BGL/

```
python -u train_vector_2LSTM.py -train_file ../data/bgl_log.seq_normal -seq_length  
10 -model_dir ../weights/vector_matrix/ -onehot 1 -  
template2Vec_file ../model/bgl_log.template_vector -template_file  
../middle/bgl_log.template -count_matrix 1
```

异常检测：LogAnomaly/LogAnomal_BGL/

```
python -u detect_vector_2LSTM.py -test_file ../data/bgl_log.seq -seq_length 10 -  
model_dir ../weights/vector_matrix/ -n_candidates 15 -windows_size 3 -step_size 1 -  
onehot 1 -result_file ../results/bgl_log_precision_recall.txt -label_file ../data/bgl.label -  
template2Vec_file ../model/bgl_log.template_vector -template_file  
../middle/bgl_log.template -count_matrix 1
```
